Light rain	Light rain	Heavy Rain	Heavy Rain	Light rain	Cloudy
Precipitation probability					
40%	50%	50%	50%	50%	20%

Forecast for Tuesday 28 Jun 2022

Weather: Cloudy with some quite persistent rain, heaviest in southwest of area, driven by strong southerly winds, summit gales. Some areas towards the Aberdeenshire hills and eastern Cairngorms will see some shelter and although cloudy will see less rain with drier interludes. Anywhere exposed to the southerly winds will like be wet for most of the day with some localised flooding a possibility. Rain will eventually become lighter and move away east this evening.

Chance of cloud-free hill tops above 800m: 30%, best chance of cloud free tops lower hills north and east towards Aberdeen.

Low Cloud and visibility: Plenty of low cloud will be associated with the rainband and anywhere exposed to the southerly where we will see extensive low cloud layers from 400m. Further north in the Cairngorms the cloud will be more scattered above 5-600m. Similarly with visibility, it will be very poor for most areas west of the A9 and the Cairngorms but will improve further north and east towards the Aberdeenshire hills.

Met Office Aberdeen Meteorologist's View
A very windy day with gales on the summits. Some localised flooding in the heavy rain is possible with watercourses filling up quickly.

Forecast for Wednesday 29 Jun 2022
Weather: A dry start to the day and some brightness breaking through, however some lingering mist and low cloud is likely. Some showers developing but also a lot of bright and sunny weather, still very windy and winds easing later in the afternoon.

Maximum wind: Southerly 20-25mph gust 40mph.

Chance of cloud-free hill tops above 800m: 80%, scattered low cloud in the morning and then patchy cloud in association with showers.

Low Cloud and visibility: Scattered cloud above 600m in the morning and then patchy cloud lowering to 700m in any showers. General visibility will be good by reducing in any showers.

Temperature: **Glens:** Plus 12 rising to 17 Celsius.
At 800m: Plus 7 rising to 11 Celsius.
Freezing level: Above all summits.
